

logical solutions for professional document imaging

CREATING A SAFER STORAGE ENVIRONMENT AND PROVIDING EASY ELECTRONIC
RETRIEVAL OF ALL OF YOUR CRITICAL DOCUMENTS

2020DOC®

2020DOC® professional imaging system is designed for automated storage and retrieval of imaged documents. Examples are: signed forms, signature cards, signed loan contracts, employee records and account holder correspondence. All scanned documents can be permanently archived on CD or DVD for off-site storage and disaster recovery. Open system architecture gives you control of your image data.

2020DOC® PROFESSIONAL DOCUMENT IMAGING SYSTEM

By storing your documents electronically, all of your files are available across your network. This saves staff time in retrieving documents, enhanced security and eliminates misfiled documents. Electronic distribution and availability from many offices can add a level of service that is not possible by other means. Eliminating storage space can avoid expensive remodeling and make the environment much more professional for your account holders and staff. Advanced scanning, OCR and document image controls put you in the driver's seat for your e-Document strategy.

Key 2020DOC® product features include:

- Efficiently access documents in a browser-based and/or Windows-based environment.
- Simple access of all documents stored for each account holder with a comprehensive search tool.
- File cabinet structure eliminates misplaced files while providing long-term secured storage of documents.
- Accessibility of Documents at any networked workstation - even remotely.
- Customizable document storage scheme allows you to mimic effective processes.
- Efficiently search for multiple document types across multiple document locations with only one search.
- Leverage the "Smart Indexing" for increased accuracy and productivity of indexing.
- Additional search capabilities through Optical Character Recognition (OCR) for converting image data into text for indexing.
- Image encryption for complete security.
- Comprehensive user-defined access and security capabilities.
- "Federal Reserve" Check import capabilities for researching cleared draft items.
- Unrestricted software and scanner licensing for flexible utilization.
- Flexible open architecture for seamless interface to various software applications.
- SQL/ODBC compliant.
- "Mass Export" functionality that restores data to its unsecured format with proper authority levels.
- Check21 enabled!
