

## iSweep

VERSION: 7.8.0.2

RELEASE DATE: NOVEMBER 19, 2019

iSweep is a utility application that securely moves files between operating locations or between servers in eDOC Innovations' document processing system. It also downloads security data for operation in remote locations.

### PRODUCT UPDATES

- Added logic to handle index fields named "CheckBundle", "Documents" or "Document" in the RBK record.
- Changed RDI.ini parameter for the location of the Local Store root folder to "LocalStoreRoot" (backward compatible with the previous "LocalStore" setting).
- Added logic to handle multiple instances of the ISAPI Web Portal.
- Changed success status values to work with both ISAPI Web Portal and Upload.php file uploads.
- Fixed logic so that items can be swept without checking either of the auto-fill boxes.

### SYSTEM REQUIREMENTS

This version of iSweep is compatible with all previous versions of DOCLogic applications 7.5/8.5 and later with the following exception: The Local Store feature requires ProDOC Version 7.7.0.10 or later.

eDOC Innovations officially supports:

- Windows 7, 8, 8.1, 10
- Windows Server 2008R2 and Server 2012
- Internet Explorer 11.x, Chrome 46.0.2490.86 and Firefox 42.0

Other OS and third party applications may or may not be 100% compatible and are not officially supported.

### USER DOCUMENTATION

iSweep administrative information is included in the related eDOC application documentation available in the documentation library in eDOC's Client Center. Click on the eLearning tab: <https://edoclogic.com/>

### INSTALLATION INSTRUCTIONS

To upgrade to this version, contact eDOC's Client Development team at **800.425.7766 option 2** or [csr@edoclogic.com](mailto:csr@edoclogic.com)
