

## CheckLogic Lite

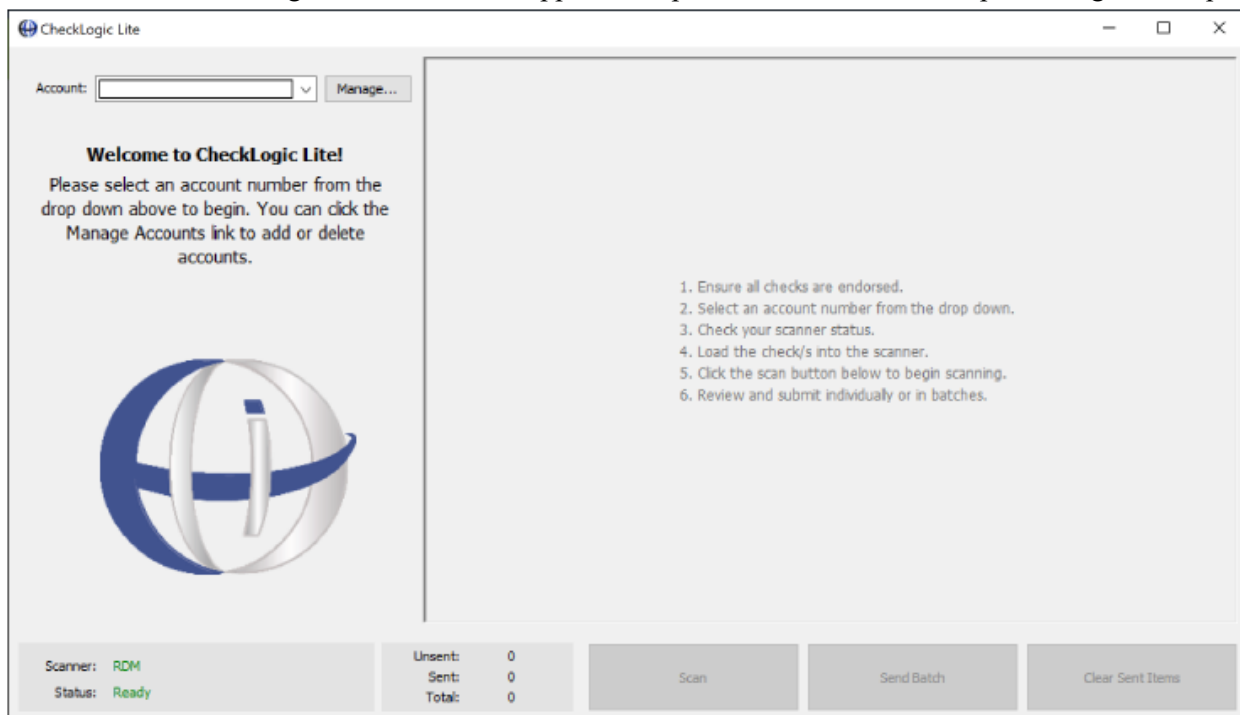

VERSION: 8.8.0.4

RELEASE DATE: FEBRUARY 25, 2020

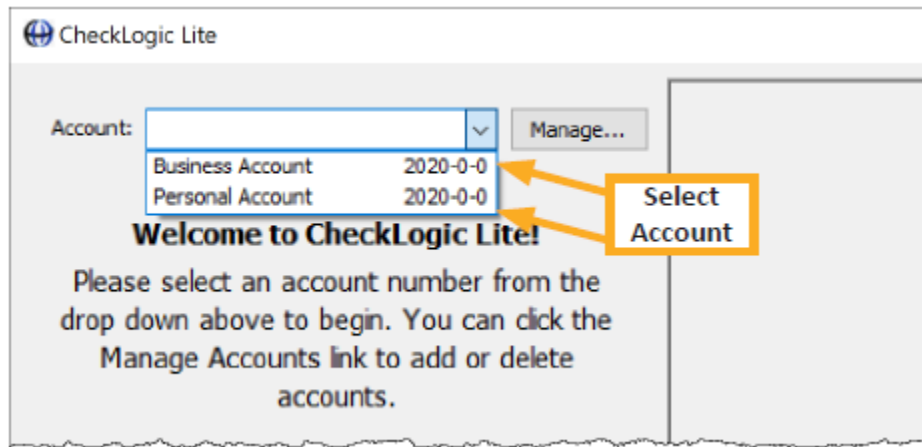

We have modified the existing CheckLogic Lite scanning client application by adding the ability scan, review, and submit multiple items in a faster and more efficient manner. We have also added ability to submit items for multiple accounts without having to restart the application to change the accounts.

### NEW PRODUCT RELEASE:

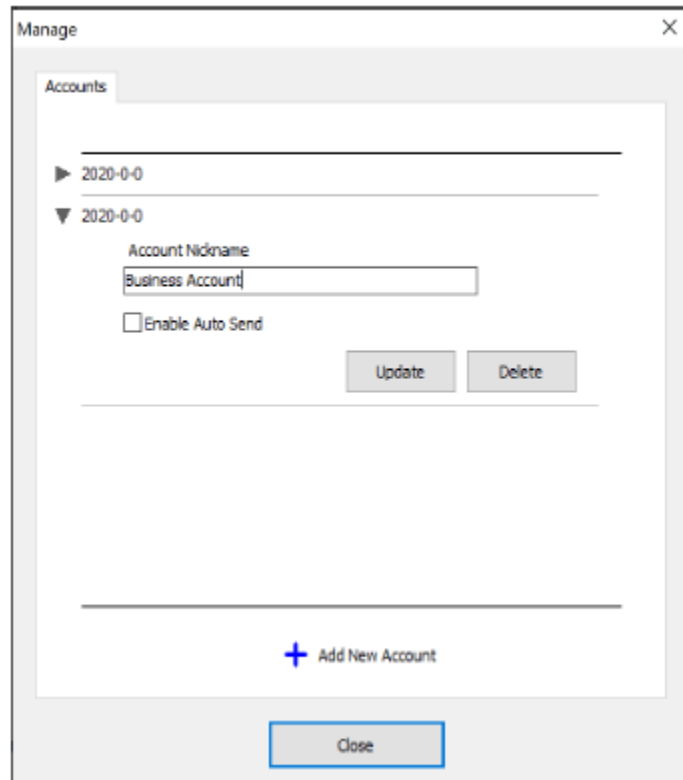

- Upgraded the existing version of CheckLogic Lite.
  - The new application will utilize the functional core of CheckLogic Lite.
  - A redesigned interface will support multiple accounts and efficient processing of multiple items.

- Multiple deposit accounts.
  - The new application allows users to switch easily between accounts.
  - An account selector has been added to the main dialog.

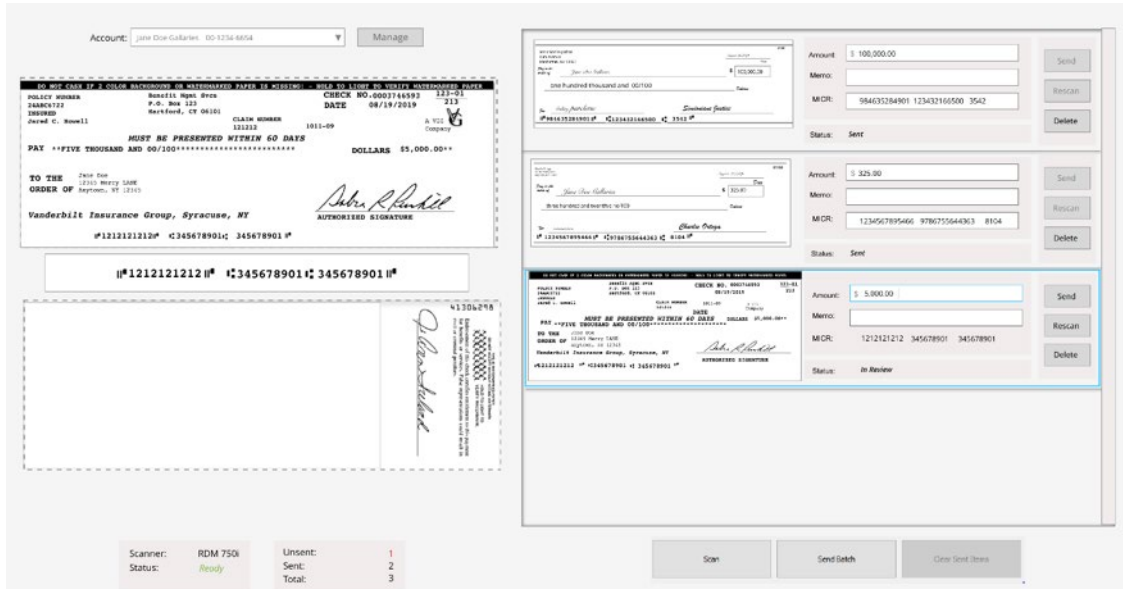

- Requires the user to delete or upload any items on the working list that are still in process before switching accounts.
- Deposit account maintenance.
  - A new dialog has been added to manage the deposit account list which is stored (encrypted) in the registry of the local machine.

- The dialog allows users to add or delete accounts using the existing process, which is to log in to the eDOC member portal using the account credentials and get a registration key. The key is then used to download and store the account information in the local registry.

- Multiple item processing.
  - Scanned items are displayed in a split screen mode with an enlarged check image for review on the left side, and a list containing all scanned items on the right.
  - The preview images may be zoomed by double clicking on them.
  - The list provides an item status and controls for data review and entry.
    - Declared amount (required)
    - MICR
    - Memo field

## SYSTEM REQUIREMENTS

This version of eDOCsSignature Admin Pages requires REST ISAPI Portal (RIP) version 8.8.0.0 or later and REST API Processor (RAP) version 8.8.0.2 or later.
