

## IntelliSweep

VERSION: 7.8.0.2

RELEASE DATE: FEBRUARY 25, 2020

IntelliSweep is a utility service application that imports documents into the 2020DOC system, primarily those created by ProDOC, CheckLogic and eDOCsSignature. It monitors a list of root folders and their subfolders waiting for documents to work on. It also has options to import records and images from information in CSV files, or from information extracted from the names of the image files themselves. Upgrade this version to ensure documents from new versions of eDOCsSignature, CheckLogic and ProDOC are correctly imported into the 2020DOC system.

### PRODUCT UPDATES

- Fixed a bug that was causing errors when importing eDS Package documents if the package was unchanged.
- The sweep interval set in the admin is now limited to a minimum of 30 seconds.
- Fix logic so if an RBK record does not have a \_Doc\_ID field (and therefore a new Doc ID and filename are being created), the "numeric" subfolder name is based on the new Doc ID instead the original filename.

### SYSTEM REQUIREMENTS

This version of IntelliSweep requires MySQL Configurator 8.8.0.11 or later. It is designed to import documents created by all versions of ProDOC, CheckLogic, and eDOCsSignature versions 8.8.0.1 and later. Documents imported with this version of IntelliSweep cannot be viewed by application versions prior to 7.0.0.1 if Changeable Encryption is used, and 7.0.0.10 if control ID-dependent encryption is used.

eDOC Innovations officially supports:

- Windows OS 8.1 and Windows 10
- Windows Server 2012 and 2016

Other OS and third-party applications may or may not be 100% compatible and are not officially supported.
