

eSignDOC

VERSION: 7.8.0.2

RELEASE DATE: MAY 19, 2020

eSignDOC is a scheduled task application that communicates with eDOCsSignature, DocuSign, or Sertifi web services to carry out eSign functions requested by ProDOC/Packages. It prepares documents and sends them to the eSign provider which then sends them to the customer for electronic signing. It also queries the eSign provider's web service to get signing status and download completed documents. Upgrade your version to receive the latest eSign functionality for your packages workflow.

PRODUCT UPDATES

- Added improved handling for banded TIFF image files

SYSTEM REQUIREMENTS

This version of eSignDOC requires MySQL Configurator 8.8.0.11 or later, ProDOC 7.8.0.9, RIP 8.8.0.1, RAP 8.8.0.3, and RAP_eDS 8.8.0.100.

Contact eDOC's Client Development team at 800.425.7766 option 2 or csr@edoclogic.com for information on licensing and setup of compatible applications.

eDOC Innovations officially supports:

- Windows 8.1, 10
- Windows Server 2012 and Server 2016

Other OS and third party applications may or may not be 100% compatible and are not officially supported.
